

Virtual Grade 3-5 Workshop  
Kansas City, MO  
July 2020

Greg Tang's

# Best Practices & Best Ways to Practice

# Agenda July 2020

---

I. Addition/Subtraction Progressions

II. Multiplication Progressions

III. Division Progressions

IV. Place Value & Rounding

## I. Explore

- Problem solving  
NOT procedure following
- Efficiency does NOT matter
- Counting & low level strategies are fine
- See & use multiple strategies

## II. Scaffold

- Use what's known to figure out what's unknown
- Use more efficient and generalizable strategies
- Compare & evaluate models, strategies, procedures
- Move toward algorithms when appropriate

## III. Practice

- Repetition vs variation
- Explicit vs embedded
- Group vs independent
- Digital vs written
- Concrete, pictorial, abstract
- Goal: procedural fluency

## IV. Mastery

- Add rigor (more reasoning)
- \* Multistep problems
- \* Non-standard situations
- Tricky situations
- Speed & efficiency
- Algebraic thinking

VI. Solve using only mental math.

---

1.

$$265 + 378$$

\_\_\_\_\_

2.

$$486 + 296$$

\_\_\_\_\_

3.

$$841 - 673$$

\_\_\_\_\_

4.

$$754 - 387$$

\_\_\_\_\_

## VII. Solve working left to right.

---

1.

$$\begin{array}{r} 467 \\ + 358 \\ \hline \end{array}$$

2.

$$\begin{array}{r} 576 \\ + 387 \\ \hline \end{array}$$

3.

$$\begin{array}{r} 742 \\ - 263 \\ \hline \end{array}$$

4.

$$\begin{array}{r} 824 \\ - 476 \\ \hline \end{array}$$

## Grade 3 Elapsed Time

---

1. Knaya's bus leaves school at 3:35 p.m. and drops her at home 45 minutes later. What time does she arrive at home?

2. The express train leaves *Grand Central* at 6:45 p.m. and arrives in *Sleepy Hollow* at 7:23 p.m. How long is the trip?

3. It takes Bill 23 minutes to walk to his friend's house. He arrives at 4:10 p.m. What time did he start walking?

<b>Common Multiplication &amp; Division Situations</b>	<b>Product Unknown</b>  $3 \times 6 = ?$	<b>Group Size Unknown</b> <b>“How many in each group?”</b> partitive or sharing  $3 \times ? = 18, 18 \div 3 = ?$	<b>Group Number Unknown</b> <b>“How many groups?”</b> quotative or grouping  $? \times 6 = 18, 18 \div 6 = ?$
<b>3.OA.3 Equal Groups</b>	1a. There are 3 bags with 6 plums in each bag. How many plums are there in all? <i>1b. Measurement example.</i> You need 3 lengths of string, each 6 inches long. How much string will you need altogether?	2a. If 18 plums are shared equally into 3 bags, then how many plums will be in each bag? <i>2b. Measurement example.</i> You have 18 inches of string, which you will cut into 3 equal pieces. How long will each piece of string be?	3a. If 18 plums are to be packed 6 to a bag, then how many bags are needed? <i>3b. Measurement example.</i> You have 18 inches of string, which you will cut into pieces that are 6 inches long. How many pieces of string will you have?
<b>3.OA.3 Arrays Area</b>	4a. There are 3 rows of apples with 6 apples in each row. How many apples are there? <i>4b. Area example.</i> What is the area of a 3 cm by 6 cm rectangle?	5a. If 18 apples are arranged into 3 equal rows, how many apples will be in each row? <i>5b. Area example.</i> A rectangle has area 18 square centimeters. If one side is 3 cm long, how long is a side next to it?	6a. If 18 apples are arranged into equal rows of 6 apples, how many rows will there be? <i>6b. Area example.</i> A rectangle has area 18 square centimeters. If one side is 6 cm long, how long is a side next to it?
<b>4.OA.2. Compare</b>	1a. A blue hat costs \$6. A red hat costs 3 times as much as the blue hat. How much does the red hat cost? <i>1b. Measurement example.</i> A rubber band is 6 cm long. How long will the rubber band be when it is stretched to be 3 times as long?	2a. A red hat costs \$18 and that is 3 times as much as a blue hat costs. How much does a blue hat cost? <i>2b. Measurement example.</i> A rubber band is stretched to be 18 cm long and that is 3 times as long as it was at first. How long was the rubber band at first?	3a. A red hat costs \$18 and a blue hat costs \$6. How many times as much does the red hat cost as the blue hat? <i>3b. Measurement example.</i> A rubber band was 6 cm long at first. Now it is stretched to be 18 cm long. How many times as long is the rubber band now as it was at first?
<b>General</b>	$a \times b = ?$	$a \times ? = p, p \div a = ?$	$? \times b = p, p \div b = ?$
